## **RISK ASSESSMENT OF BIOLOGICAL AND CHEMICAL THREAT**

Understanding and Managing Vulnerabilities and Potential Health Impacts

Today's environment brings unprecedented concern over the threat of pathogenic organisms (biologicals), chemical and radioactive material. The Sapphire Group is one of the nations leading experts advising companies and organizations on how to deal with these frightening yet very real situations. The Sapphire Group provides strategic consulting in the areas of vulnerabilities, crisis management, health risk analysis, emergency response and exposure assessment, occupational and environmental medicine and risk communication. Whether you're a financial institution, chemical company or another major part of our nation's business infrastructure, understanding and managing these vulnerabilities and the potential health impacts is critical to your daily operations.

The Sapphire Groups expert consultants have addressed the following types of issues:

- Review of hazardous threat policies
- Specific recommendations to increase security from all dangerous substances in air and water and particularly via the mail
- Stand-by medical assistance for exposed individuals
- Stand-by technological assistance for the sampling and analysis hazardous materials such as anthrax and highly toxic chemicals
- Emergency response planning
- Communication of complex scientific issues to non-technical audiences including the press.
